

module 'playerScore'

Actions:

1. [showScore](#)
2. [updateScore](#)
3. [removeScore](#)
4. [orderByScore](#)

showScore

key: 'showScore'

payload:

required fields:

from: Array of string; (user ids whose score to show)

to: Array of string; (user ids whom to show)

optional fields:

format: string; (a format string, that allows you to format how the score is displayed. The score replaces (\$1) inside this string. E.g. if this field says "(\$1)HP", then someone's score would look like "4HP" in their video box. If the (\$1) is omitted, then the string we are revealing is purely custom. Default "(\$1)")

order: 'lowest' | 'highest' (specify whether low scores are good or high scores are good)

updateScore

key: 'updateScore'

payload:

required fields:

scores: Array of records:

```
{  
  list: Array of string; (user ids),
```

optional:

```
  score: number,
```

```
  delta: number,
```

```
}
```

removeScore

erases the players' score and cancels the display of the scores

key: 'removeScore'

orderByScore

order players by score

key: 'orderByScore'

payload:

optional fields:

order: 'asc' | 'desc' (default 'asc')
